Attachments: FS surface sed for bass SWACs_2014-09-09.xlsx;
BERA_PlusRM11E_FS_Sediment_NaturalNeighborsData_PCBs_2009-09-29.xlsx;
BERA_Sediment_NaturalNeighborsData_AnchorFS_PCBs_2010-03-16.xlsx

Hi Kristine. Here are the Excel files you asked for. The file with the 2009 date in the file name is for analytes modeled in 2009 except PCBs. The file with 2010 in the file name is a revised PCB data file (with RM 11E data added), the file with 2014 in the filename is the dioxin and furan congener data file. Let me know please if you have questions or need additional information. John

Hi again Kristine. I'll be able to send you the spreadsheets later today. John

Thanks Kristine for your reply. I will get the Excel files ready to send and confirm LWG approval to send them to you. John

John, At this time, all we are requesting is the sediment chemistry data with coordinates of the sampling locations (Excel files). After reviewing that information, we will let you know if we need additional information.

Thanks,

Hi Kristine,

I'm writing in response to your request for spreadsheets used to calculate the SWACs in the bioaccumulation modeling report. You indicated that these spreadsheets should show the calculations, including the specific empirical data used, so that CDM can identify how the data were grouped and confirm the results.

As stated in the report (pages 11 and 12) the SWACs were calculated in ArcGIS using the natural neighbors interpolation algorithm that is built into ArcGIS software. As such, the information that CDM will need is more than just spreadsheets. You will need the following:

- sediment chemistry data with coordinates of the sampling locations (Excel files)
- GIS shape files for fish home ranges (these shape files provide the SWAC averaging areas and the fish sampling coordinates)
- information about the ArcGIS natural neighbors algorithm that was used to calculate the SWACs
- metadata from the ArcGIS files

I've spoken to our GIS analyst who did this work. It will take us a few days to assemble the information once we're authorized to proceed. Let us know please how we should proceed.

John

Bob and Jim - Please provide the spreadsheets used to calculate the SWACs in the bioaccumulation modeling report. These spreadsheets should show the calculations, including the specific empirical data used, so that CDM can identify how the data were grouped and confirm the results. Having the LWG calculations in hand will facilitate this review.

Let me know if you have any questions.

Thanks,

Kristine Koch
